

High genetic variability in the dominant forest floor bryophyte *Hylocomium splendens*

Engh, I.B., Stenøien, H.K. and Hassel, K., 2012

Glacial survival?
High rate of migration across oceans and the arctic ice.

Common bryophyte sampled over 80 years from most of its geographical range. Genetic analysis done using microsatellites. Very high level of variation found in all samples. All haplotypes are unique.
